Cybersecurity Engineer

NDICHIA QUINCY FIEN

Cybersecurity Engineer

✉ quincyfien99@gmail.com 📞 +237 653 319 958 📍 Bambili, Cameroon

TECHNICAL SKILLS

Security Tools

Kali Linux · Nmap · Wireshark · Metasploit

IAM & Access

FreeIPA · LDAP · RBAC · Sudoers Policies

Networking

TCP/IP · Firewalls · iptables · VPN

OS Platforms

Linux (AlmaLinux, Ubuntu, CentOS) · Windows

Dev & Scripting

Python · Bash · Git · Version Control

Office & Data

Excel (analytical logs) · LaTeX · MS Word

LANGUAGES

English

Professional

French

Intermediate

EDUCATION

Professional Masters

Cybersecurity
University of Bamenda · 2025–Present

B.Sc. in Physics

University of Bamenda

INTERESTS

- African History & Current Events
- Technical Research & Documentation
- Cybersecurity Trends & CTFs

PROFESSIONAL SUMMARY

I am a Cybersecurity Master's student and researcher with a strong analytical foundation in physics, specialised academic training in network security, secure system architecture, and identity & access management. I have the ability to conduct threat simulations, design access control models, and document technical findings with precision. I am highly detail-oriented, and seeking a dynamic operational security internship to apply hands-on security skills in a real-world environment.

ACADEMIC PROJECTS & EXPERIENCE

Threat Simulation & Vulnerability Assessment

University of Bamenda · Network Security Lab

- Performed network reconnaissance and vulnerability scanning using Kali Linux, Nmap, and Wireshark across simulated enterprise environments.
- Mapped attack surfaces, documented system flaws, and produced structured mitigation reports aligned with industry frameworks.
- Reproduced real-world attack vectors (XSS, privilege escalation) in lab environments to validate detection and response procedures.

Identity & Access Management (IAM) Lab

University of Bamenda · Systems Security Course

- Deployed a centralised authentication system using FreeIPA across a multi-VM environment (Kali Linux, AlmaLinux 9, Ubuntu Server, CentOS).
- Configured sudoers access policies, SSH key-based authentication, and iptables firewall rules to enforce least-privilege principles.
- Designed RBAC identity matrices and documented access control logic in compliance with IAM best practices.

Malware Detection Research — Static Feature Classification

Academic Research Project

- Compared SVM, Neural Network, and GAN-augmented classifiers for malware detection using static binary features.
- Contributed to dataset curation, feature extraction pipeline, and performance benchmarking across classification models.
- Authored the technical report section covering methodology, results analysis, and security implications.

Cyberspace Ethics & AI Research Report

University of Bamenda

- Conducted thematic analysis on student interview transcripts exploring the ethical implications of generative AI in academic settings.
- Produced a master's-level analytical report applying qualitative research methodology and academic writing standards.

CORE COMPETENCIES

Network Security & Defense

Threat modelling, vulnerability assessment traffic analysis

Risk Assessment

Risk identification, mitigation documentation, compliance

Analytical Thinking

Data-driven security analysis, pattern recognition, log review

Secure System Architecture

IAM design, access control policies, firewall configuration

Collaborative Research

functional academic teamwork, peer-reviewed reporting
