SKILLS

Python · Django · Flask · DRF

JavaScript · React · HTMX · Alpine.js

PostgreSQL · PostGIS · Schema Design

Query optimization, indexing

Docker · Redis · Celery · Nginx

Git · Linux · CI-minded workflows

Security

RBAC, auth flows, session mgmt, input sanitization

EDUCATION

MSc, Cybersecurity & Network Defense

University of Bamenda · 2025–Present

BSc, Physics

University of Bamenda

CORE STRENGTHS

- Full-stack delivery, DB to UI
- Distributed systems & consistency
- Client-facing platform architecture
- Physics-trained analytical rigor

NDICHIA QUINCY FIEN

FULL-STACK DEVELOPER

Full-stack developer with a physics-trained, systems-first approach to engineering. Builds production-ready platforms end to end, from schema design through payments, real-time tracking, and deployment, for clients across e-commerce, print operations, and logistics.

CLIENT PROJECTS

Effica: Enterprise Printing Press Management Platform · Client Project

- Authored a 75-requirement, IEEE-compliant SRS (v4.1) and 20-week delivery roadmap for a Django platform digitizing Cameroonian print-shop operations.
- Integrated MTN Mobile Money and Orange Money payment rails alongside a Ghost Account flow for walk-in, non-registered customers.
- Built a fast, lightweight frontend with HTMX, Alpine.js, and Tailwind CSS.

AI-Powered Logistics & Delivery Tracking Platform · Client Project

- Architected a three-surface logistics system — WhatsApp customer interface, Flutter rider app, React admin dashboard — on one Django/DRF backend.
- Implemented real-time delivery tracking with PostgreSQL/PostGIS and WebSockets, plus route optimization via Google OR-Tools and Google Maps Platform.
- Containerized services with Docker, Redis, and Celery behind Nginx for scalable async processing.

Circuit Forge: Custom PC E-Commerce Platform · Client Project

- Built a full e-commerce platform for custom PC builds with a dynamic compatibility checker preventing invalid part combinations at checkout.
- Shipped real-time inventory tracking with restock alerts and a multistep checkout; designed a responsive glassmorphic UI in custom CSS.

ACADEMIC & RESEARCH PROJECTS

Replicated Key-Value Store: Fault-tolerant, master-replica store in Python with vector-clock consistency, heartbeat monitoring, and quorum-based writes. (github.com/ndichia-quincy/replicated-kv-store)

Malware Classification System: PE-header feature pipeline with SVM, Neural Network, and GAN-augmented classifiers; SMOTE oversampling to boost recall on rare variants. (github.com/ndichia-quincy/malware-classification)
